TECHNICAL SUPPORT AND CUSTOMER SERVICE
iGEO ERP cloud platform | Bogotá

- Customer service skills, providing technical support in an effective and friendly manner.
- Experience in diagnosing and resolving technical problems in hardware and software.

EDUCATION

Feb 2019
Present

SYSTEMS ENGINEER
Fundación Universitaria Los Libertadores | Bogotá

I am currently in my last semester of my degree, where I have developed strong problem solving skills, with a special focus on software development and web creation. I have acquired fundamental knowledge in programming, data structures and logic development, which I apply to build effective and efficient solutions.

PROJECTS

Portfolio:
I developed a web portfolio using React as frontend language, focused on component learning and reusability. The site highlights my professional profile through a dynamic and adaptive interface. On the backend, I used Django to manage the storage of contact data in a PostgreSQL database. Although still in its initial phase, I am still working on the continuous improvement of the portfolio, optimizing features and performance based on user feedback. This project not only increases my professional visibility, but also allows me to hone my React and end-to-end development skills.

Store and Inventory Project:
This project is an application to manage sales, add products and control stock. It uses Django as backend, React in the frontend, PostgreSQL for the database and Docker for containerization. The app includes modules for product management, inventory control and sales registration. Although still under development, it continues to improve in functionality and performance, offering a comprehensive solution for inventory and sales management.

OBJECTIVE

Proactive Systems Engineer with experience in Python, Django and Django REST for backend development and APIs, currently learning Kubernetes and working with Docker. In my last semester of my degree, I have acquired a solid foundation in programming, data structures and logic development, which allows me to offer effective solutions in software development and web creation. I stand out for my ability to solve problems in an agile way, writing structured code with classes and functions. I am a constant learner, always looking for new technologies to apply them in challenging projects that drive my technical growth and allow me to work in collaborative teams that promote excellence and innovation.

SKILLS

- Python
- Django
- Django rest
- React
- Scrum
- MySql
- Docker
- PostgreSQL
- Bases de datos
